(54) Title: METHOD OF CONTROLLING OPTICAL CHARACTERISTIC OF OPTICAL ELEMENT AND OPTICAL DEVICE

(57) Abstract: An optical element is formed by using a plurality of pillar-shaped members arranged periodically and a pair of support members arranged perpendicularly relative to the direction of arrangement of the pillar-shaped members so as to sandwich the pillar-shaped members. The optical element showing a periodic structure of periodic distribution of refractive index. An optical characteristic of the optical element is modulated by applying force to the optical element in a direction perpendicular to the direction of arrangement of the pillar-shaped members and changing the diameter of the pillar-shaped members.
